traditional designs

Traditional Designs are a wide variety of America's most popular styles in sizes to fit around most 36- or 42-inch-wide fireplaces. These mantles are available in pre-sized and custom-made openings.

For wood types and finish options, see back cover.

adjustable interchangeables

We designed three mantle shelves (Concorde, Stanford and Wedgewood) that can be combined with three different surrounds (Ivy Green, Mountain Brook and Salem) to create nine mantle styles. The surrounds are adjustable in width and height. For wood types and finish options, see back cover. Shelves not adjustable.

The Length (D) will be made to your specifications.

Custom sizes available in all styles.

contemporary collection

The designs within the Contemporary Collection were inspired by the preferences of designers within the inner cities of America. The styles are meant to be simple, with an emphasis on straight lines rather than the more traditional dentil moulds, heavy crowns and over used flutes. The Contemporary Collection will add style to any room setting, whether it be found in a Chicago loft, New York condo, or a simple country cottage. All the designs are available built to your specified opening dimensions and in a variety of wood types and finishes.

Cherry with Cherry Finish

premier cabinet line

UNIQUELY DESIGNED
CABINETS WITH ADJUSTABLE
OPENINGS

The Premier Mantle Cabinet Line offers three unique designs in a variety of wood types and finish options. All three designs are available as cabinets or corners. Accessory options such as bookcase/TV tops and raised hearths are available for each design. Side bookcase options are available for cabinets only.

The Premier Cabinet Line features openings that are adjustable in both width and height! The width is adjusted by simply sliding the fascia boards in and out behind the legs. Simple straight line cuts are needed to adjust the opening height. You simply match up the size range of your firebox with the proper Premier Cabinet model number.

For wood types and finish options, see back cover.

To order, select mantle name, model/size, indicate cabinet or corner, select wood type, finish option and any additional accessory (if applicable). Model number example to order Richmond SS Cabinet: RSSCAB; to order Richmond SS Corner: RSSCOR.

measuring guide

PREMIER MANTLES MEASURING GUIDE

Ordering your wood Premier Mantle is easy when you follow the instructions below. You will need to provide three important mantle dimensions. The mantle Opening Width "C"; mantle Opening Height "B"; and mantle Return Depth (space behind mantle) "G".

Once you have determined these three dimensions, compare your needs to the stock sizes listed near each model within this catalog. NOTE: You can determine if a stock mantle opening will work by taking a few simple measurements. If your fireplace and facing material width and height measurements are determined to be no more than 6" wider and taller than the stock mantle opening width "C" and height "B", that stock sized mantle will fit your application. Just be sure that the stock size return depth "G" is at least 1/4" **greater** than the actual projection of your facing material out from the sheetrock wall.

CUSTOM MANTLE MEASURING

To insure the proper fit of your custom mantle use the following guidelines to measure your mantle:

DETERMINING THE MANTLE OPENING HEIGHT "B"

The Opening Height of the mantle of "B" dimension is determined by measuring the Height of the fireplace facing material and subtracting 1/2 inch from the Height to allow the mantle to overlap the facing material. See FIG. 1.

DETERMINING THE MANTLE OPENING WIDTH "C"

To determine the Opening Width of the mantle "C", measure the Width of the facing materials and subtract one inch. This allows the mantle to overlap the facing material 1/2 on each side. You can overlap the facing material up to one inch less than the Width of the mantle leg if needed. See FIG. 1.

DETERMINING THE MANTLE RETURN DEPTH "G"

All fireplaces have a front or face made of non-combustible material such as brick, tile, marble or slate. This facing material may be installed flush with the wall of the fireplace or it may protrude in front of the fireplace wall. The distance the facing material sticks out in front of the wall is used to calculate the mantle Return Depth "G" measurement. See FIG. 1. Calculate the "G" measurement by adding 1/4 inch to the thickness of the facing material protrusion. Ex. If you are installing the mantle over 3/4 inch thick marble, you should specify a Return Depth "G" of 1" (marble thickness 3/4 inch + 1/4 inch = 1 inch). See FIG. 1.

READY TO ORDER

Once you determine your mantle Opening Height "B", mantle Opening Width "C", and mantle Return Depth "G" you can calculate all remaining mantle measurements using the standard dimensions found near each model within this catalog. This is important as you should always check to make sure that the overall length (Shelf Length "D") and outside leg to outside leg distance (Body Width "E") fit your situation. Important: Make sure your Shelf Length "D" allows you to install your mantle within windows and doors etc. Make sure your Body Width "E" is smaller than your hearth length so that your mantle legs do not hang off a raised hearth. See FIG. 1. Calculate these measurements by using the table below once you have determined your "C" dimension.

CALCULATING CUSTOM MANTLE DIMENSIONS

When you customize your mantle Opening, you also change the Overall Shelf Length "D", Body Width "E", and Overall Mantle Height "A". See FIG. 2. Use the following formulas to determine these sizes:

Overall Shelf Length "D"	$D=2Y+C$
Body Width "E"	$E=2X+C$
Overall Mantle Height "A"	$A=B+Z$
